Associate of Applied Science
Consider a wonderful career as a Radiology Technologist (RT). It is one of the fastest growing areas in health care today. The RT is a very valuable member of the health care professional team.

Great Basin College’s program is approximately five semesters long and consists of didactic and clinical education. Our program is accredited by the (JRCERT) Joint Review Committee on Education of Radiologic Technology.

The program will consist of approximately 1,260 hours of clinical education in affiliated sites throughout Northern Nevada. All students will follow the normal GBC sessions and vacations.

Graduates of this program will be eligible to apply to the certification examination from the American Registry of Radiologic Technologists (ARRT). Successfully passing this examination will certify you as a Radiology Technologist. With your dedication and hard work, our program will provide you with the means to pass the registry for the ARRT, as well as enable you to be one of the best qualified entry-level radiology technologists.

### Admission

Admission to the AAS degree in Radiology Technology Program is a separate process from admission to Great Basin College. Application deadline for fall entry is May 1 of each year. Enrollment to the program is limited. Students will be admitted only in the fall semester to begin the five-semester program of courses. Qualified applicants are selected first from the Great Basin College service area. If there are still positions opened, residents from Nevada and then out-of-state applicants will be considered. Students who have applied for and been accepted into the radiology program are designated radiology technology students. Only radiology technology students can enroll in courses with the RAD designation, except for RAD 101, unless prior approval is given by the radiology technology instructor.
